# ZRO-SHIFT® Anti-skid Rubber Mat

**ZRO-SHIFT®** replaces wood blocking and bracing securement systems and secures palletized case goods, roll paper, bulk bags, pipe loads, tile products, and metal, concrete, roofing, and finished lumber materials. Supplied in palletized sheet or large roll form, ZRO-SHIFT® is manufactured by reclaiming crumb rubber from discarded automobile tires and a variety of die trimmings from rubber products. The superior quality is maintained by rigorous monitoring of sheet consistency, gauge, and tensile. Easy-to-use and provides increased safety for loaders (no risk of nailing or extracting wood blocking), ZRO-SHIFT® eliminates nail holes in trailer floors and damage to your product, therefore reducing claim costs.

Fulfills requirements for load securement patterns set forth by the AAR (Association of American Railroads). Approved load securement device with the FMCSA (Federal Motor Carrier Safety Administration), CCMTA (Canadian Council of Motor Transport Administrators), CVSA (Commercial Vehicle Safety Alliance), and fulfills the FMCSA-DOT (Department of Transportation) Regulations "North American Cargo Securement Standard."
